Who We Are

BRINGING SOLAR TO EVERYDAY LIFE

Solar Depot is a wholesale distributor and systems integrator of solar electric and solar thermal systems. For over 30 years, we have been designing and supplying solar energy systems for residential, commercial, and industrial applications, making us among the largest and most experienced solar integrators in the United States.

Acquired by ITOCHU International in 2007, ITOCHU brings enhanced resources and a global business perspective to Solar Depot to enable its growth and expanded role in the solar market for the coming years.

All the Right Gear

We offer a wide range of solar electric power systems and solar thermal products, including solar water heaters, solar space heating systems, solar pool heating systems, and "in-floor" radiant heating systems.

Headquartered in Northern California, we also operate multiple branch facilities on both coasts. With the emphasis on quality control, our shipping and receiving facilities are thorough, efficient and detail-oriented. We maintain a large inventory and in most cases are prepared to ship orders within 24-48 hours.

Thoughtful Design

Our staff includes a team of engineers and technicians with years of experience in system design, integration, installation and diagnostics.

We have designed and supplied thousands of solar systems for various applications ranging from residential and commercial utility-connected systems to stand-alone systems for Wireless Communications, Telecom, Telemetry, UPS Backup Power Systems, Industrial Mining Operations and others. Our customers include the U.S. military, the Federal Government, NASA, the State of California, Nevada, Oregon, Washington, Municipal Utilities, as well as the private sector.

Partners at the Ready

Our team offers a complete range of energy solutions, from initial consultation and site visits, to custom design and installation. Solar Depot also has a network of authorized solar installers across the country that has many years of experience in the industry.

Solar Depot also has a training program for contractors to assist them in entering the solar field. Since 1999, we have trained over 3,000 contractors in solar. Several of the most successful solar installers today are graduates of Solar Depot's training program.

Expert Financing

Most PV projects require financing to become a reality. Whether your system is residential or commercial, we offer assistance in securing the financing needed to help you sell more PV projects.

We have financing professionals on staff who are experts in the securing of residential loans, commercial leasing agreements, equity loans and lines of credit, and a variety of rebates for you or your customers.
